PRODUCT CATALOG**

# “I ❤️ MY JOB!”

I've uttered that phrase hundreds, if not thousands, of times on my YouTube channel and across my myriad of social media accounts – but it's pretty easy to say when your profession is also your hobby!

As I look today at how we have evolved our Aquascape product offerings over our 30 years in this industry, I'll admit – I'm a bit jealous. So many state-of-the-art water feature gadgets and devices (that I would have loved in my early years as a hobbyist) exist today solely because of our relentless goal to “improve the consumer's experience with water features.”

Basically, the trials and tribulations we experienced as early pond hobbyists led Aquascape to developing ground-breaking solutions that make the hobby of water gardening more beautiful and more enjoyable than

ever before, while also making ponds, waterfalls, and fountainscapes simple to build and easy to maintain.

From a smartphone app that puts controlling your water feature directly into your hands to fire elements that expand your hours of enjoyment, our product offerings can't be found anywhere else. When you add in breakthrough innovations like the IonGen™ System G2 that controls algae electronically and the Automatic Dosing System that eliminates much of your manual routine maintenance, you can see why I'm so excited about today's technological advances!

Plus, thanks to the prevalence of social media, we now have the opportunity to share our passion for water features with the WORLD and inspire one another to fully enjoy “Living the Aquascape Lifestyle®!”

I invite you to scan the code below and begin enjoying all the ways we connect with fellow water feature owners around the world!

Simply put, "I ♥ MY JOB!" and we at Aquascape are fully dedicated to helping you say "I ♥ MY WATER FEATURE!"

**A Pondless® Waterfall** is simply a re-circulating waterfall or stream without the presence of a pond. Aquascape Pondless Waterfalls work by pumping water contained in a large, in-ground reservoir up through the Waterfall Spillway, allowing the water to flow back down into the reservoir. This simple recirculation system requires very little maintenance, is easy to install, and ideal for families with young children or pets that love to play in water.

Selected waterfall kit components work well together to complement and enhance your existing landscape. In just one day you can enjoy the soothing sights and sounds that a waterfall adds to your yard.

## THE PONDLESS® WATERFALL KIT

1. **Pondless® Waterfall Vault**—Houses and protects pump
2. **AquaBlox® Water Storage Modules**—Provides water storage
3. **Pond Pump**—Pumps water from the underground reservoir to the spillway to create a waterfall
4. **Pipe**—Directs water from the basin/reservoir to the Waterfall Spillway
5. **Rocks and Gravel (not included)**—Naturalizes the waterfall, protects the liner, and filters the water
6. **Liner and Underlayment**—Creates the form of the waterfall stream and holds water in the water storage area
7. **Waterfall Spillway**—Provides a smooth, flowing waterfall

**Two forms of filtration** are critical to maintaining a healthy ecosystem pond: mechanical and biological. Ecosystem ponds process fish waste, uneaten fish food, leaves, debris and runoff from lawns through mechanical and biological filtration.

In ecosystem ponds, mechanical filtration is provided by a pond skimmer and biological filtration is provided by a BioFalls® Filter.

To keep your pond or water feature looking beautiful, it is important to provide proper filtration. Features and benefits of Aquascape filters are noted in the following pages, making it simple and easy to select the correct filter for your application.

## POND SKIMMER FILTERS

Pond skimmers are designed to eliminate water quality problems and reduce maintenance by removing debris before it sinks to the bottom of the pond, allowing a pond to be installed anywhere, even beneath trees. Because the skimmer removes debris before it reaches the pump, it acts as a pre-filter, reducing pump maintenance and making pump access quick and easy. All pond skimmers include a limited lifetime warranty.

## AQUABLOX® WATER STORAGE MODULES

AquaBlox® Water Storage Modules provide an efficient way to maximize water storage capacity in Pondless® Waterfall reservoirs, rainwater harvesting systems, and permeable paver applications. They allow over 3 times more water storage capacity than gravel and hold approximately 7.4 gallons of water per cubic foot, compared to gravel, which holds approximately 2.2 gallons of water per cubic foot. Extra water storage capacity means less time topping off the reservoir due to evaporation. It is also easier to clean and less prone to clogging than traditional gravel basins. Construction with AquaBlox requires a smaller footprint than reservoirs constructed with gravel resulting in fewer labor hours to excavate and move gravel, as well as less liner and geotextile underlayment.

## SNORKEL® AND CENTIPEDE® WETLAND FILTER

Our patented Snorkel® Vault and Centipede® Module were specifically designed to tackle the common issues that plague large scale water features. They are modular in design, allowing builders and designers the flexibility to expand the system to meet their needs. It is highly effective at removing sediment (suspended solids) from ponds, improve water clarity, and reduce the need for costly and invasive dredging. The filter system works on earth bottom and liner membrane ponds and is easily retrofitted onto existing ponds. It also reduces the physical and chemical maintenance that goes along with removing algae.

**Pond aerators** supply dissolved oxygen directly to ponds, helping all biological processes and resulting in healthier fish and plants. Proper aeration creates a stable pond environment by keeping water healthy, clean, and clear. Aeration can also be used during cold winter months to keep a hole open in the ice formed at the surface of the pond, allowing for the exchange of gases.

## 2-OUTLET AND 4-OUTLET POND AERATION KITS

Aquascape 2-Outlet and 4-Outlet Pond Aeration Kits provide efficient aeration for ponds and water features up to 3,500 gallons, resulting in a healthier ecosystem and happier fish and plants. **Aquatic plants** are an important part of the water garden. They provide beauty and naturalization with a huge array of plant choices. Most importantly, they help balance the pond's ecosystem and provide valuable biological filtration that removes nitrogen, ammonia, nitrates, and other minerals from pond water. These excess nutrients are often the cause of unsightly water conditions. The end result helps to minimize pond maintenance, leaving more time to enjoy your pond. Without aquatic plants, your pond would not be able to function as a complete ecosystem.

## AQUATIC PLANTERS

Aquascape Aquatic Planters are ideal for all pond plants. Made from fine, porous material, the planters allow water in while preventing soil from entering your pond. The flexibility of Aquatic Planters makes it simple to place plants between rocks and other form-fitting areas. Aquatic Planters blend into their surroundings and will not break or crack like traditional plastic planters.

## LINER, UNDERLAYMENT, AND GEOTEXTILE

Underlayment is installed before the liner to prevent punctures from rough or rocky ground. Not only does underlayment provide protection for the liner, it also allows the ground to breathe from underneath. The fabric allows the earth's gases to escape from underneath the liner rather than becoming trapped, causing gas bubbles to push the liner up into the pond.

STEP 2: CHOOSE THE WATER FEATURE

Rainwater Harvesting Fountain Add-On Kit

#44000

Kit Includes:

- Pondless® Waterfall Vault
- Downspout Filter
- AquaSurge® 2000-4000 Adjustable Flow Pond Pump
- Kink-Free Pipe—¾" x 25'
- Overflow Kit
- Decorative Fountain Component Bag

Select from a number of decorative bubbling urns and stone fountains (seen on pages 121-127) that sit on top of the Aquascape Rainwater Harvesting System reservoir. The water spills over the top of the decorative piece and flows back down into the sub-surface reservoir where it is re-circulated by the pump.

Rainwater Harvesting Pondless® Waterfall Add-On Kit

#44001

Kit Includes:

- Pondless® Waterfall Vault
- Waterfall Spillway
- Downspout Filter
- AquaSurge® 2000-4000 Adjustable Flow Pond Pump
- LED Lighting Package
- Flexible PVC Pipe—2" x 25'
- 45 mil EPDM Liner—10' x 20'
- Overflow Kit
- Installation Kit

Use this kit to create a beautiful waterfall or stream. Rainwater stored in the sub-surface reservoir is pumped to the top of the waterfall where it flows out and over the rocks creating melodic sounds. The water returns to the reservoir that's covered with decorative stone and is continually re-circulated up and over the waterfall.

Rainwater Harvesting Downspout Filter

#30166

The Downspout Filter is installed at the base of the downspout ready to capture rainwater and remove a variety of debris that may be flushed into the system during a rain event. Incoming rainwater is passed through a series of mechanical filters that remove leaves, twigs, seeds, and small sediment that accumulate on the surface of the roof between rain events.

- Utilize our online Rainwater Harvesting Calculator to determine how many Downspout Filters your project will require.
- Add a Downspout Filter onto a water feature and use rainwater to top off the water level.
- Handles up to a 1,500 sq. ft. roof and more than 50 gallons per minute flow rate.
- Add a Downspout Filter to any fountain or Pondless® Waterfall feature and make it sustainable!
